2022-09-01

The first step when running a code in R is to install the necessary packages. In this case we will be using the tidyverse package. To install the latest version of this package we run the chunk below:

```
install.packages("tidyverse",repos = "http://cran.us.r-project.org")

## Installing package into 'C:/Users/simpl/AppData/Local/R/win-library/4.2'
## (as 'lib' is unspecified)

## package 'tidyverse' successfully unpacked and MD5 sums checked
##
## The downloaded binary packages are in
## C:\Users\simpl\AppData\Local\Temp\RtmpmGRVu7\downloaded_packages
```

We then load the tidyverse package

```
library("tidyverse")

## -- Attaching packages ----- tidyverse 1.3.2 --
## v ggplot2 3.3.6      v purrr   0.3.4
## v tibble  3.1.8      v dplyr  1.0.9
## v tidyr   1.2.0      v stringr 1.4.1
## v readr   2.1.2      v forcats 0.5.2
## -- Conflicts ----- tidyverse_conflicts() --
## x dplyr::filter() masks stats::filter()
## x dplyr::lag()    masks stats::lag()
```

Data Import

We will then need to import the data we have calculated in SQL we can do this with the read_csv() function

```
ride_information <-read.csv("https://www.dropbox.com/s/3agtk4eam3oqtn8/ride_information.csv?dl=1", head=1)
```

We then print the data to check on the data types

```
print(ride_information)
```

## [ reached 'max' / getOption("max.print") -- omitted 5543401 rows ]
```

As we can see the `ride_length` value is a chr type. We need to change the data type to a period format for that we will need to install the lubridate package. We do that with the chunk below

```
install.packages("lubridate", repos = "http://cran.us.r-project.org")
```

```
## Installing package into 'C:/Users/simpl/AppData/Local/R/win-library/4.2'
## (as 'lib' is unspecified)
```

```
## package 'lubridate' successfully unpacked and MD5 sums checked
```

```
## Warning: cannot remove prior installation of package 'lubridate'
```

```
## Warning in file.copy(savedcopy, lib, recursive = TRUE):
## problem copying C:\Users\simpl\AppData\Local\R\win-
## library\4.2\00LOCK\lubridate\libs\x64\lubridate.dll to C:
## \Users\simpl\AppData\Local\R\win-library\4.2\lubridate\libs\x64\lubridate.dll:
## Permission denied
```

```
## Warning: restored 'lubridate'
```

```
##
## The downloaded binary packages are in
## C:\Users\simpl\AppData\Local\Temp\RtmpmGRVu7\downloaded_packages
```

We then run the package

```
library("lubridate")
```

```
##
## Attaching package: 'lubridate'

## The following objects are masked from 'package:base':
##
##      date, intersect, setdiff, union
```

We will then use the `hms()` function in `lubridate`. This changes the `data_type` of `ride_length` to the period data type:

```
ride_information$ride_length<- hms(ride_information$ride_length)
```

```
## Warning in .parse_hms(..., order = "HMS", quiet = quiet): Some strings failed to  
## parse, or all strings are NAs
```

We then print the data again to confirm our results

```
print(ride_information)
```

```

## [ reached 'max' / getOption("max.print") -- omitted 5543401 rows ]
```

We can confirm that the `ride_length` column is now on a period data type. We can now proceed with our analysis

Data Graphing

For our analysis we will first graph the number of rides per day. Regardless of the user type

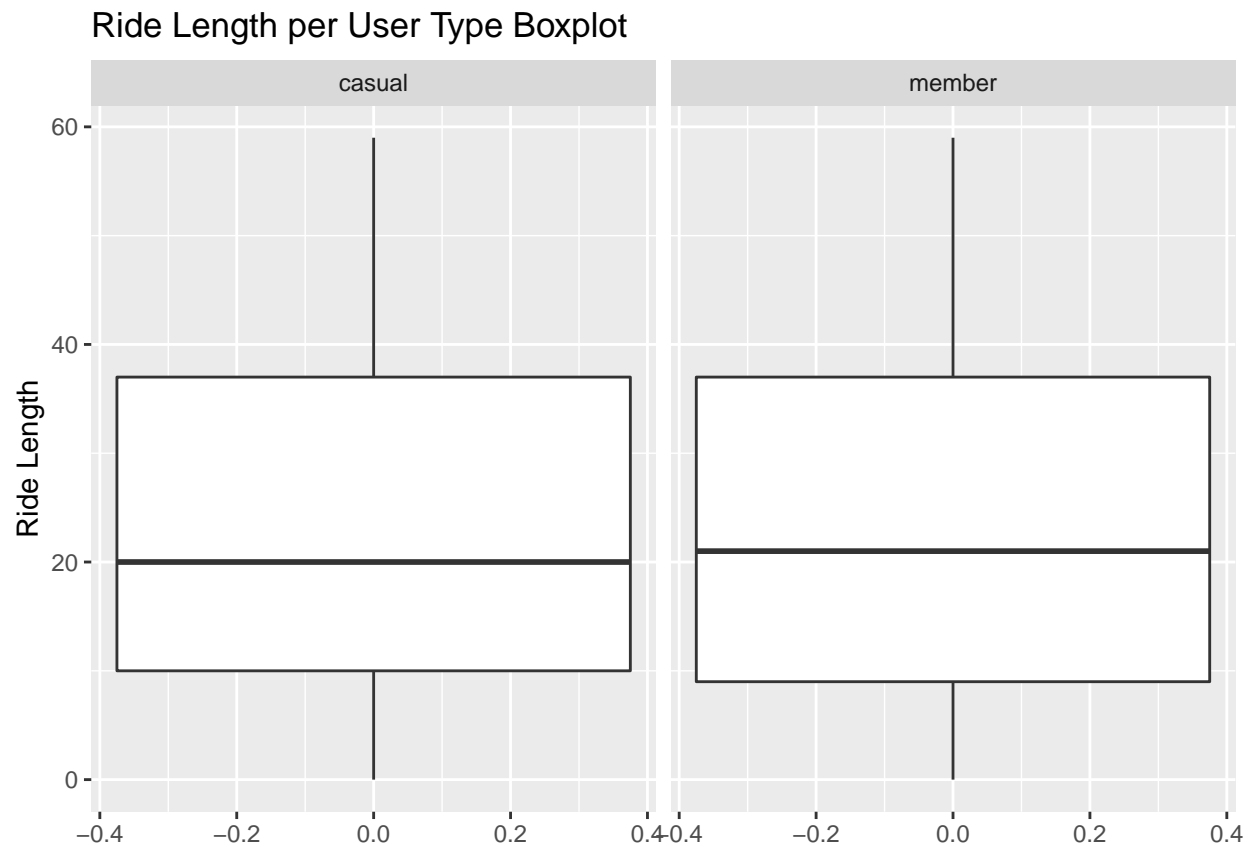

```
ggplot(data =ride_information, mapping = aes(x=day_of_the_week))+ geom_bar()+labs(title = "Number of Ri
```

We will then create a box plot of the data for each user type. This will help us see if there are any outliers in the data

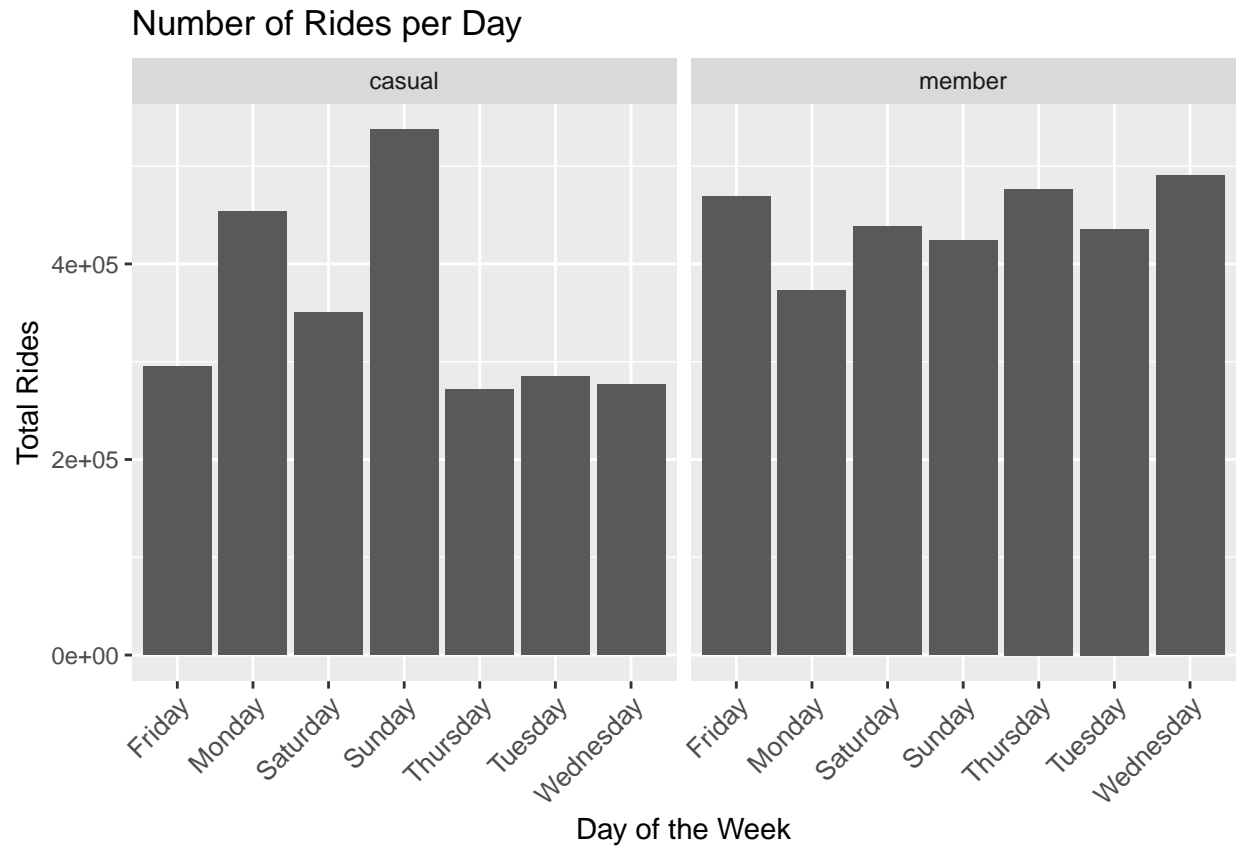

```
ggplot(data =ride_information, mapping = aes(y=ride_length))+ geom_boxplot()+ facet_wrap(~member_casual)
```

```
## Warning: Removed 5485998 rows containing non-finite values (stat_boxplot).
```

We will then look the the number of trips for each day divided by the user type: member or casual

```
ggplot(data =ride_information, mapping = aes(x=day_of_the_week))+ geom_bar()+ facet_wrap(~member_casual.
```

We will then look the total ride time by day divided by user type: member or casual

```
ggplot(data =ride_information, mapping = aes(x=day_of_the_week , y=ride_length))+ geom_histogram(stat =
```

```
## Warning: Ignoring unknown parameters: binwidth, bins, pad
```

```
## Warning: Removed 5485998 rows containing missing values (position_stack).
```
